

Ridiculous. Why would any group of people want to limit traffic and weather information from the public or private sector? It almost seems like they feel that their "copyrights" are being violated. ??? I spend a lot of time travelling by automobile from one state to another. Having this information by XM radio helps me to be prepared for my travels. Often I begin in areas that do not have television, internet access or radio signals from the next city so XM radio keeps me informed.
